

DUAL VAC
Fire Sprinkler Vacuum

The Dual-Vac is a new way to approach the old problem of removing water left in a piping system after draining, repairs and modifications become easier. When connected to piping the water distribution system becomes a vacuum system.

- Combines the benefits of a wet/dry vacuum and a submersible pump.
- Submersible pump and a series of floats will keep the canister empty.
- Designed to run unattended for 4-6 Hours
- 110 Volt A.C. 12 Amps
- Pumps 10 gallons at a time.
- 5 foot lift with vacuum,15 foot lift with pump.

Floats within the Dual-Vac automatically turn on and off the water discharging submersible pump keeping the canister empty while pulling a constant vacuum into the pipe.

Applications

- Change all types of sprinkler heads
- Relocating drops for tenant improvements
- Modifying existing steel, plastic, copper systems
- Making repairs on a damaged or leaking system
- Removing water from pre-action or dry systems

Used as a pump for Anti-Freeze Solutions:

After water is remove from system, connect 3/4" water hose to sprinkler system, remove lid, pour in anti-freeze solution, replace lid, repeat as required.
