8	270	230	216	216	212	180	135

Copper fittings have the same "rated" internal working pressure as straight, scamless ASTM B88 Type K annealed copper water tube. The "actual" hursting pressure of both fittings and tube exceed 4 times the internal water pressure above. Example: the bursting pressure of 1/2" drawn Type K is 5600 psi.

Soldering and Brazing Copper Tube

Soldering and Buzzing with capathry solder joins firtings is the most common system for joining copper tube. In actual practice, most soldering is done at temperatures about 350° F to 550° F, while buzzing is done at temperatures ranging from 1100° F to 1550° F.

The theory of soldering and brazing is the same for all diameters. Busically, when two motal surfaces are close to one another as expect tabe is when coupled into a fitting, liquid metal will be drawn into the gap by "espillary" action, in normal copper systems the gap will be between 0.0005" and 0.005". However, capillary action will occur up to 0.010" gaps.

Basic Steps in the Joining Process

Measuring - Measuring the length of the tube must be accurate since it is imperative that the copper tube must lit to the end of the socket in the fitting in order for the strongest joint to be made.

Cutting. Cutting the tube can be accomplished in a number of ways to produce a satisfactory, square-endout. The tube can be out with a disc type tube cutter, a hacksaw, abrasive wheel, or on a bandsaw. Care must be taken that the tube is not significantly deformed while being cut.

Reaming - Most methods of cutting leave a small burr on the end of the tube which must be removed since crosion-currosion may occur due to local turbulence and mercused velocities in the tube. Tools used to ream tube each include the reaming blade on the tube cutter, files, a packet knife, or a scitable deburring tool. With soft tube, our most be taken not to get the tube end out of round by applying too much pressure. Both the inside and the outside of the tube may require removal of the burr.

Cleaning - Cleaning the outside of the tube and the litting socket is crucial to a good joint. The removal of oxacts and surface soil is necessary if litter metal is to flow properly and form intermetablic bonds with the two metal surfaces. Oxide, surface soil and oil can interfere with the strength of the joint and this can result in the joint's failure. Mechanical cleaning is a simple operation. The end of the tube can be cleaned using said clothor nylon abrasive pada for a distance only slightly more than the slepth of the fitting specket. The socket of the fitting should also be cleaned using said cloth, abrasive pads, or properly sized fitting wire brushes.

Coppe is a soft motal; if too much material is removed, a loosefit will result and interfere with satisfactory capillary action in making the joint. Chemical cleaning may be utilized, providing the tabe and fittings are throughly rinsed, according to the manufacturer's recommendations furnished with the cleaner. This will help neutralize any acidic conditions that may exist. The surfaces, once cleaned, should not be touched with

Product Specification:

Cello is the only full-line copper solder fittings manufacturer in Canada and is also one of only two full-line solder fittings manufacturers in North America.

All Wrot Fittings meet SWDA Standards for Safe Drinking Water.

All states are compliant with the Federal Safe Drinking Water Act which requires lead content of 8% or less for plumbing fixtures, valves, fittings and pipe.

Cello Products Inc. certifies that it manufactures all its cast brass and wrought copper solder joint fittings to the general specifications outlined in the following industry standards:

Wrought Copper and Copper Alloy Solder Joint Pressure Fittings: ASME/ANSI Std. B16.22 - 2001

Cast Copper Alloy Solder Joint Pressure Fittings: ASME/ANSI Std. B16.18 - 2001

Wrought Copper and Wrought Copper Alloy Solder Joint Drainage Fittings -- DWV ASME/ANSI Std. B16.29 - 2001

Cast Copper Alloy Solder Joint Drainage Fittings: ASME/ANSI Std. B16.23 - 2002

Bronze Pipe Flanges and Flanged Fittings: ASME/ANSI Std. B16.24 - 2001

Cast Bronze Threaded Fittings: ASME/ANSI Std. B16.15 - 1985

Wrought Copper and Copper Alloy Braze - Joint Pressure Fitting ASME/ANSI Std. B16.50 - 2001

Cast Copper Alloy Pipe Flanges and Flanged Fittings ASME/ANSI Std. B16.24 - 2001

Wrought Copper LW Solder Joint Pressure Fittings: MSS SP-104 - 1990

Cast Copper Alloy Flanges and Flanged Fittings

Class 125, 150, 300: MSS SP-106 - 1990

Cello further certifies that the materials used to manufacture these fittings are made in compliance with the following industry standards:

Tubular Wrought Copper:

Standard Specification for Seamless Copper Tube: ASTM B75 Alloy C12200

Products Made From Sheet:

Standard Specification for Copper Sheet, Strip, Plate

and Rolled Bar: ASTM B152 Alloy C11000

Cast Products:

Standard Specification for Copper Alloy Sand Castings for General

Applications; Federal Specification WW-U-516 for Type III, Class A and B Copper Alloy Unions: ASTM B584 Alloy C84400

The industry standards are: ANSI (American National Standards Institute); ASME (The American Society of Mechanical Engineers); MSS (Manufacturers Standardization Society of the Valve and Fittings Industry Inc.); ASTM (American Society for Testing and Materials).

All Cello Products Inc. wrought copper fittings are NSF 61 registered.

All pressure fittings manufactured by Cello Products Inc. have Canadian Registration Numbers (CRN)

0A4925.5C Pressure pipe fittings

0B4925.5C Flanges

(note - the 5 is needed to designate the first province of registration)

International Quality Standard: Cello Products is certified to ISO 9002 standards through QMI (Quality Management
